

DISEASE REGISTRY

IntelHC helps optimize patient care & improve quality scores.

How IntelHC Helps Improve Quality Score: Disease Registries

After aggregating medical claims and encounter data, reference laboratory test values, and each health plan's pharmacy claims data, we have created DISEASE REGISTRIES for patients with diabetes, asthma and cardiovascular disease for several California medical groups and a health plan.

We can demonstrate how IntelHC can help optimize patient care, and improve quality scores. For California medical groups, year-to-date Pay for Performance scores are calculated for each of the Pay for Performance measures. Sample reports include (1) Primary Care Patient Data Status Reports (Diabetes & Asthma), (2) Breast Cancer Screening - Listing of Patients by Primary Care Physician, (3) Diabetes Disease Registry, and (4) Asthma Disease Registry

How Risk Scores Determine Acuity

Risk scores are calculated for each patient in the disease registries using Symmetry Health's Episode Treatment Groups/Episode Risk Groups system. Both retrospective and prospective risk scores are calculated from the system. The prospective score is used to determine patient acuity for each patient in the registry. Patients are segregate into quartiles based on their acuity relative to the other patients in the registry. These patients can then be given high priority for disease or case management by the medical director.

DISEASE REGISTRY

IntelHC helps optimize patient care & improve quality scores.

I mprove Quality Scores

- ✓ **Primary Care Physician Patient Data Status Report** - For patients with diabetes and patients with asthma.

- ✓ **Breast Cancer Screening** - Patients by Primary Care Physician.

- ✓ **Childhood Immunizations** - Patients by Primary Care Physician.

- ✓ **Diabetes Disease Registry** - Medical director registry status reports.

- ✓ **Asthma Disease Registry** - Medical director registry status reports.
